## Green Track Systems > as unique as your city

**STRAILastic** Green Track Systems can be individually adjusted. Our products are available for grooved rails as well as for Vignol rails and can be applied to standard tracks and to constructions with sleepers.

The variety of our systems allows you to choose according to optical criteria. There are systems which reach up to the head of rail, systems which end below the head of rail and even systems which leave the rail completely accessible.

### Benefits of all versions at one glance.

- made of vulcanised rubber > colour-stable
- UV and ozone resistant
- protection of fastenings and easy maintenance of rails and small iron parts
- stable position due to groove/tongue connection
- smooth surface
  - > brake sand can be cleaned away easily
- stray current insulating acc. to DIN EN 50122-2
- environment-friendly (made of recycled rubber which can be recycled again to 100%)

## Chamber filling elements reaching up to top of rail > we help to save construction time

The optimised STRAILastic Chamber Filling Systems consist of a high-quality new rubber rail foot profile in combination with chamber filling elements that reach up to the head of rail. Fields of application: standard tracks and tracks with sleeper constructions.

Due to their special geometries, the profiles can be installed easily and quickly – no bonding necessary  
> reducing construction time considerably.

The height of the chamber filler offers another advantage: you can do without sealing the joints  
> reduction of running maintenance costs.

### BENEFITS AT ONE GLANCE:

- made of vulcanised rubber > colour-stable
- UV and ozone resistant
- stray current insulating acc. to DIN EN 50122-2
- easy and quick installation
- no bonding necessary, therefore it can be removed easily and quickly at the end of service life
- with system components also for turnouts, intersections, narrow radiuses and welding joints
- environment-friendly (made of recycled rubber which can be recycled again to 100%)

**You would like to save even more construction time?**

Then use our **STRAILastic \_GRS** track section base plate. That and other **STRAILastic** accessories are of course still part of our product range and available to you.
